Abdominal migraine (AM) is a kind of migraine which causes severe pain in the area of the abdomen.The pain is usually around the navel (belly button) area, which is called the periumbilical area.. AM is most common in children starting at about age 7, but younger and older children may also get AM. Usually, abdominal migraines stop by the time children become teenagers.

Abdominal migraine - Simple English Wikipedia, the free

Women with cystic fibrosis (CF) now regularly survive into their reproductive years in good health and wish to have a baby. Many pregnancies have been reported in the literature and it is clear that whilst the outcome for the baby is generally good and some mothers do very well, others find either their CF complicates the pregnancy or is adversely affected by the pregnancy.
