Economic forecasting is the process of making predictions about the economy. Forecasts can be carried out at a high level of aggregation—for example for GDP, inflation, unemployment or the fiscal deficit—or at a more disaggregated level, for specific sectors of the economy or even specific firms.. Many institutions engage in economic forecasting: national governments, banks and central ...

The Real-Time Crime Forecasting Challenge sought to harness the advances in data science to address the challenges of crime and justice. It encouraged data scientists across all scientific disciplines to foster innovation in forecasting methods. The goal was to develop algorithms that advance place-based crime forecasting through the use of data from one police jurisdiction.

“Neural networks have been used in forecasting for over 20 years, but recently we have seen a huge increase in computing power which has made them much more practical,” says Nikos Kourentzes Associate Professor (Senior Lecturer) at Lancaster University. A neural network is a network that tries to model the neurons or brain cells in the human brain.
