This work was supported in part by a research grant by the National Institute of Standards and Technology (NIST), Federal Bureau of Investigation (FBI), and Department of Defense (DoD/CTTSO/TSWG), #N41756-10-C-3382, awarded to Itiel Dror; and in part by funds provided by the Research Foundation of the City University of New York to Saul Kassin.

The forensic confirmation bias: Problems, perspectives

A digital forensic investigation commonly consists of 3 stages: acquisition or imaging of exhibits, analysis, and reporting. Ideally acquisition involves capturing an image of the computer's volatile memory (RAM) and creating an exact sector level duplicate (or "forensic duplicate") of the media, often using a write blocking device to prevent modification of the original.
