FORMAL VERIFICATION OF AUTONOMOUS VEHICLE PLATOONING

### **formal systems verification vol pdf**

In computer science, specifically software engineering and hardware engineering, formal methods are a particular kind of mathematically based technique for the specification, development and verification of software and hardware systems. The use of formal methods for software and hardware design is motivated by the expectation that, as in other engineering disciplines, performing appropriate ...

### **Formal methods - Wikipedia**

A combined methodology for the formal verification of autonomous automotive platooning is proposed. • Program model-checking is applied for verification of the “actual” agent code used in the implementation of platooning.

### **Formal verification of autonomous vehicle platooning**

Software verification is a discipline of software engineering whose goal is to assure that software fully satisfies all the expected requirements.

### **Software verification - Wikipedia**

The study presented in this paper concerns the safe design of high-performance embedded systems, specifically dedicated to intensive data-parallel processing as found, for instance, in modern multimedia applications or radar/sonar signal processing.

This document proposes to establish a new Federal Motor Vehicle Safety Standard (FMVSS), No. 150, to mandate vehicle-to-vehicle (V2V) communications for new light vehicles and to standardize the message and format of V2V transmissions. This will create an information environment in which vehicle...
