Gasoline direct injection (GDI) (also known as petrol direct injection, direct petrol injection, spark-ignited direct injection (SIDI) and fuel-stratified injection (FSI)), is a form of fuel injection employed in modern two-stroke and four-stroke gasoline engines. The gasoline is highly pressurized, and injected via a common rail fuel line directly into the combustion chamber of each cylinder ...

Tuning Notes for the Triumph “Bonneville” Family of

VR6 engines, and the later VR5 variants, are a family of internal combustion engines, characterised by a narrow-angle (10.5° or 15°) V engine configuration. Developed by the Volkswagen Group in the late 1980s, evolutions of these engines are still produced by them.. When containing six cylinders, a VR-engine's cylinder block consists of two cylinder banks (left: 1-3-5; right: 2-4-6) while ...
